TITLE : CONNECTOR FOR CONDUCTOR

ABSTRACT : PROBLEM TO BE SOLVED: To connect a conductor certainly with a conductive plate for wiring and establish an assembling method to require low cost and a less number of component parts to be assembled.

SOLUTION: A conductive plate for wiring 11 to be installed in a part 8 of an electric insulating body 1 is furnished with a conductor connection part 20 and a can bearing part 15, and a threaded hole 12. A screw 25 is fitted in the hole 12 in such a way as advancing and retreating. A cam 26 is borne by the can bearing part 15 rotatably. The cam 26 is furnished with a conductor pressing part 28 to put a conductor inserted from a conductor inserting hole 9 in pressure contact with the conductor connection part 20 and a part to be pressed 29 where to the screw 25 is pressed. The cam 26 is provided with a shank 27 to be borne rotatably in the can bearing part 15 in a weight equilibrium position in which the conductor pressing part 28 is held in the condition separated from the conductor connection part 20.
